

Open tools. Real learning. Built for Filipinos.

A free, multilingual learning platform that turns 1,291 curated tools into practical pathways for Filipino students, educators, and professionals.

Independent · Open source · Privacy-conscious · Offline-ready

LIVE PRODUCT

Search, guided starting points, trust signals, and a learner-first navigation system are already in production.

Make every powerful, free tool findable, trustworthy, and usable for every Filipino learner.

Abakada is not trying to create another software market. It is building the public navigation layer that helps learners discover, understand, and confidently adopt what is already free.

OPEN

Code under MIT. Content under CC BY 4.0. Transparent, reusable, and forkable.

LOCAL

Built around Filipino learner roles, Philippine languages, and real connectivity constraints.

PRACTICAL

Every path ends in action: choose a tool, complete a task, build a repeatable habit.

The software gap is now a navigation gap.

Capable free tools already exist. The missing layer is a trusted, local path from discovery to confident use.

01

Paid defaults

Familiar software often assumes a subscription, a credit card, or an institution-wide license.

02

Scattered alternatives

Open tools live across technical repositories, English-first sites, and uneven documentation.

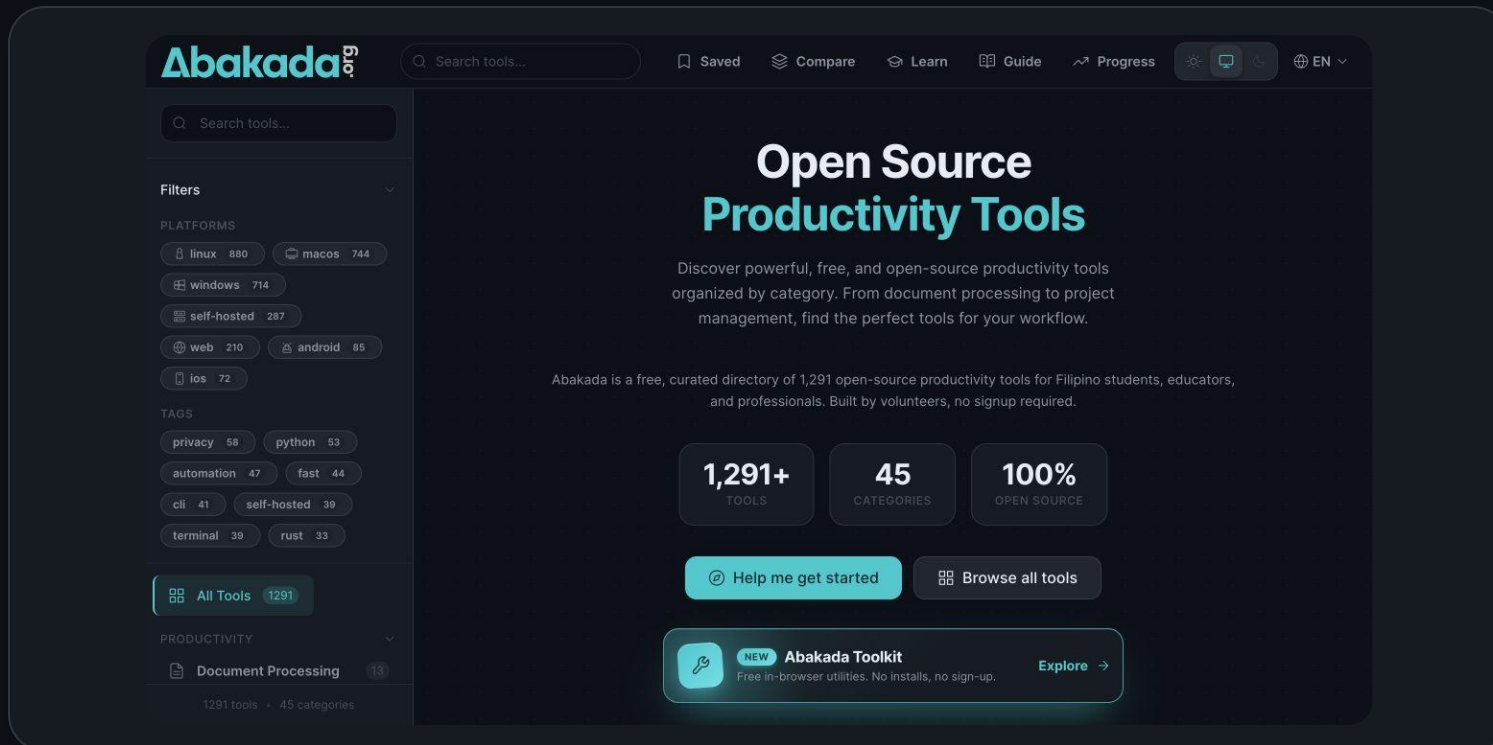

03

A confidence gap

Even after finding an option, learners still need context: Is it safe? Is it maintained? Where do I begin?

A trustworthy front door—not another link list.

The homepage makes a complex ecosystem legible in one glance, then gives beginners an obvious next move.

SEARCH WITH SIGNAL

Filters by platform, tags, and 45 curated categories reduce exploration time.

BEGINNER ON-RAMPS

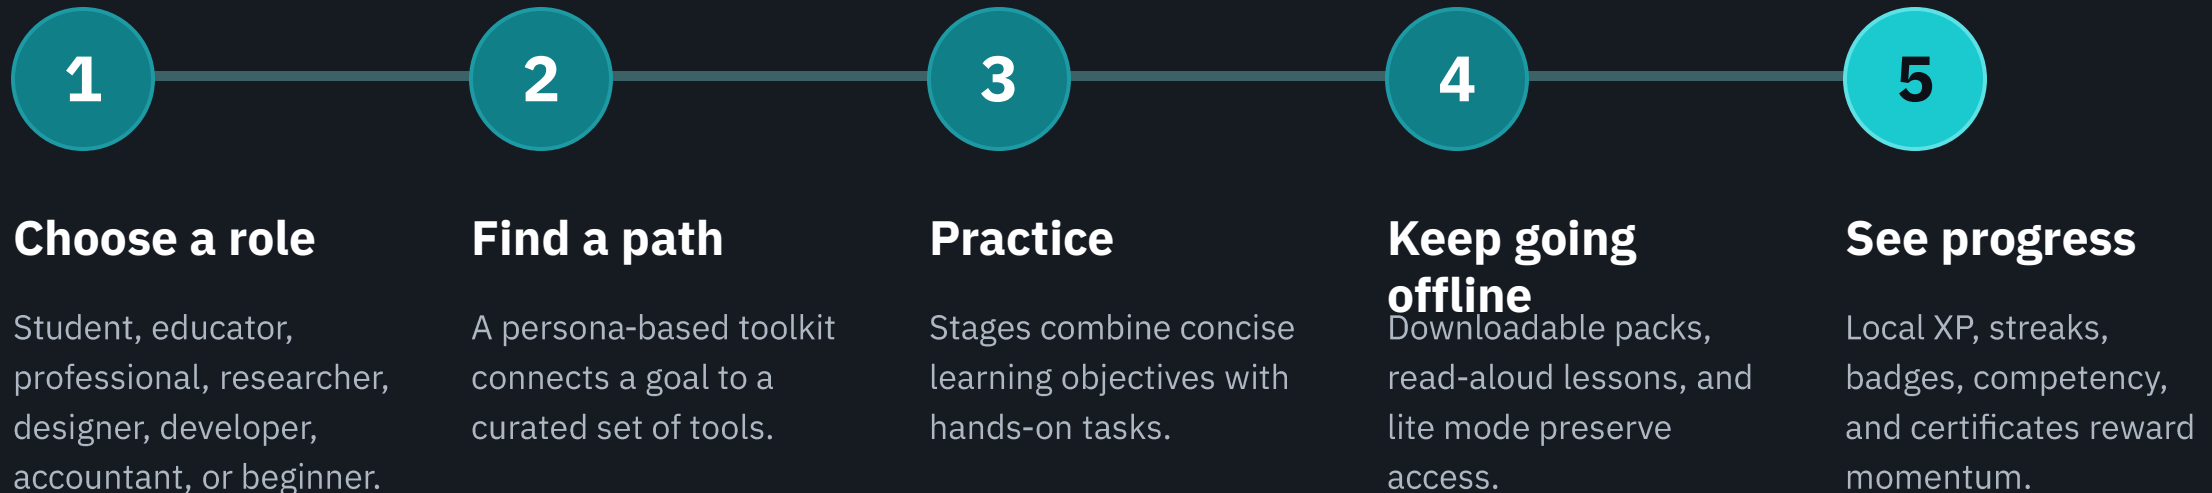

Role guidance and familiar paid-to-free alternatives lower the cost of getting started.

TRUST IN CONTEXT

Licensing, maintenance signals, press coverage, and transparent counts sit beside the choice.

The experience is designed as a progression, not a directory.

Each layer removes a different kind of friction until a learner can act with confidence.

No account is required. Learner state stays on the device.

The catalog is the foundation. Learning is the product.

Abakada compounds value by adding structure above the same verified source of truth.

CATALOG	1,291 entries	A broad, searchable base of tools and alternatives.
CURATION	45 categories	Manual review, licensing, and editorial grouping.
GUIDANCE	10 pathways	Persona routes, curriculum tags, stages, and tasks.
MOMENTUM	Local progress	Bookmarks, offline packs, and completion signals.

Choice becomes confidence when the path starts with the learner.

Nine role profiles route people toward the right starting point before they face the full catalog.

5

skill tracks

10

curated paths

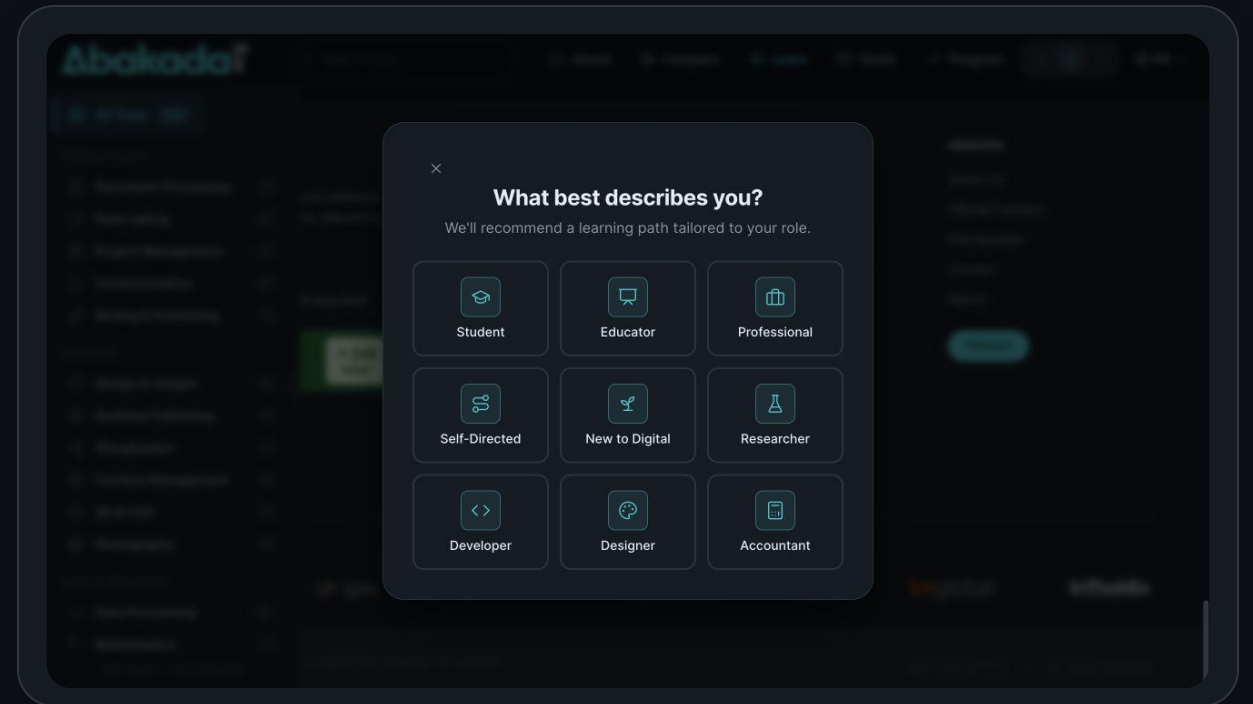

35

hands-on stages

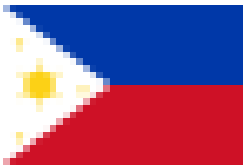

142

vetted tools used in paths

The same path logic supports students, educators, self-directed learners, researchers, developers, designers, accountants, and people new to digital tools.

Designed for the archipelago, not an ideal connection.

Accessibility is built into how the product works—not added as a campaign layer later.

4 LANGUAGES

English • Tagalog • Bisaya • Ilokano

Interface coverage and core guidance meet learners beyond English-only discovery.

OFFLINE PACKS

Download once. Learn without signal.

Path shells, recommended tool pages, and shared data are cached in a durable offline bucket.

READ-ALoud

Paced, oral-first micro-lessons

Web Speech support and one-step lessons serve low-literacy, low-bandwidth, and mobile contexts.

LITE MODE

Designed for low-data and low-end devices

Auto-detection reduces decorative media, motion, and rendering cost on constrained connections.

NO ACCOUNT REQUIRED • PROGRESS AND BOOKMARKS STAY LOCAL TO THE LEARNER'S DEVICE

Trust is earned in the details learners can verify.

The platform reduces risk through editorial review, transparent licensing, and a privacy-conscious architecture.

VETTED

Entries are reviewed for educational usefulness, licensing, safety, and project health before they become recommendations.

TRANSPARENT

Tool pages link to sources, show license and maintenance signals, and keep the catalog auditable in Git.

PRIVATE BY DESIGN

No learner account or server-side profile is required. Analytics is consent-gated; core features still work when declined.

The strongest privacy claim is architectural: Abakada does not need a learner identity to deliver value.

The product is live—and the signals are public.

Abakada ships real catalog depth, real learning pathways, and transparent audience evidence today.

MAGAZINE

Independent media coverage and an openly published visitor count provide early evidence of relevance without inventing vanity metrics.

Boringly reliable is a growth strategy.

Static-first delivery keeps the platform fast, resilient, auditable, and inexpensive as reach expands.

NO BACKEND RUNTIME

Fewer operational failure modes

NO ACCOUNT DATABASE

No learner identity store to scale

EDGE-CACHED

Spikes become a delivery problem, not an infrastructure project

Three honest ways to accelerate the mission.

Choose the contribution model that matches your institution. Each one maps to infrastructure Abakada already operates.

01

Community Supporter

BEST FOR

NGOs · schools · student groups

Extend reach, host community activations, and direct learners to trusted resources.

02

Content & Editorial Partner

BEST FOR

Educators · publishers · FOSS projects

Co-author learning paths, guides, tool collections, and Philippine-language content.

03

Infrastructure Sponsor

BEST FOR

Technology companies · funders

Underwrite hosting, domains, developer tooling, localization, or editorial capacity.

Support goes directly into the work learners feel.

The next chapter is editorial and distributive—not a speculative technology build.

- | | | |
|-----------|------------------------------------|--|
| 01 | FRESH CURATION | Keep 1,291 entries accurate, safe, and educationally relevant as projects evolve. |
| 02 | DEEPER LOCALIZATION | Expand reviewed Tagalog, Bisaya, and Ilokano coverage beyond interface strings. |
| 03 | EDUCATOR-READY DISTRIBUTION | Create printable guides, classroom collections, and offline bundles for limited-connectivity contexts. |
| 04 | NEW AUDIENCE PATHS | Co-author pathways for out-of-school youth, civic-tech volunteers, returning OFWs, and other underserved groups. |

SPONSOR A WORKSTREAM · CO-AUTHOR A PATH · DISTRIBUTE IT WHERE IT MATTERS

If this mission resonates, start with one concrete deliverable.

Sponsor a localization sprint. Co-author a learning path. Put offline packs in the hands of educators. We will shape the work around real learner needs and ship it in public.
